Since the launch of EDGE email, we have been working to make it one of the best and most secure email services available. With more and more devices and mobile devices becoming accessible through the Internet, we felt that security must be a concern for all users. Using the advanced security protocols and encryption of encrypted e-mail (EE) with Secure/Multipurpose Internet Mail Extensions (S/MIME), we have managed to deliver a secure and secure email service that is unparalleled by any other on the market today. In an effort to make the service as easy as possible to use, we have implemented a number of features that make using EDGE Mail both simple and straightforward. WHAT IS ENCRYPTED E-MAIL (EE)? Encrypted e-mail is a method of using the secure S/MIME protocol to send and receive secure e-mail. Secure e-mail can be sent over the Internet using your e-mail account, like Gmail, or over a private network using the Secure Socket Layer protocol, also known as SSL, like with Hotmail. We have built EDGE Mail to make secure e-mail easier to set up and use, allowing you to use your normal email address with us. The key difference between EE and traditional e-mail is that EE is not sent in plain text over the Internet. This is done by encrypting the e-mail message, not the email address or any other data sent, and then using a special e-mail server that we provide. Encrypted e-mail is a more secure and private way to communicate using e-mail. A TRUSTED AND SECURE EMAIL SERVICE EDGE Mail uses an advanced security protocol, commonly referred to as Secure/Multipurpose Internet Mail Extensions (S/MIME) to encrypt your e-mail, so that it cannot be read by someone who does not have the proper security keys or other information required to decrypt the message. To access your e-mail messages, you will need to receive your Key Code and your Activation Code. If you don't have a key or activation code, click on the "Accessing Your Email" link to get it. When sending e-mail messages, an encrypted envelope will be sent to your recipient's e-mail account, with your e-mail address in the subject line, notifying them that the message was encrypted. In contrast to traditional e- 82157476af
