Abraxas, Infernus, Sateles, Venor, Ulteca... List of All Hyundai Stars Cars In Malaysia... Best Quality Of All Hyundai Stars Cars Of Malaysia. Best All Video In Youtube About How To Restore A Hyundai Stars In Malaysia Q: How to use zero for Negative infinity and Positive infinity in java? Here I want to know, what is the right way to use the zero for these infinity values, negative infinity and positive infinity in java? I have tried in this way Double.NEGATIVE_INFINITY; Double.POSITIVE_INFINITY; I want to use both these values for my calculation. A: Double.NEGATIVE_INFINITY: The documentation of Double.NEGATIVE_INFINITY indicates The constant Double.NEGATIVE_INFINITY is the positive zero that may be returned by many methods as the value with the largest magnitude, and the value of which the most negative double value is positive. The constant Double.POSITIVE_INFINITY is the positive zero that may be returned by many methods as the value with the largest magnitude, and the value of which the most positive double value is positive. You may use the special value (Double.MIN_VALUE) for numeric overflow conditions. Integer.MAX_VALUE; Integer.MIN_VALUE; Both of these constants are defined as positive infinity. If you want to use it in a double, do it like this: double infinity = Math.pow(2, -56); double pow2 = Math.pow(2, -64); double infinity2 = Math.pow(2, -65); double double2 = Math.pow(2, -64); double double3 = Math.pow(2, -65); double double4 = Math.pow(2, -66); double double5 = Math.pow(2, -67); double double6 = Math.pow(2, -68); double double7 = Math.pow(2, -69); double double8 = Math.pow(2, -70); double double9 = Math. 82157476af
